

Twit-API

Build a Twitter-like API/service, which supports (at least) the following 4 requests:

1. Follow a user
2. Unfollow a user
3. Get a list of people following a user
4. Get a list of tweets of a user (including self-tweets and replies by followers)

Tips:

- Try to design and implement your solution as you would do for real production code. Show us how you create clean, maintainable code that does awesome stuff.
- Feel free to add more features! Really, we're curious about what you can think of. We'd expect the same if you worked with us.
- Documentation and maintainability is a plus.
- Don't forget automated tests.
- Consider hosting your solution on a public server, so it's easy for us to play with.

Bonus:

Clients of the service should use an API token for authentication, and the service should give a 401 error if the wrong token is used.
